EMV CHIP CARD DISTRIBUTION

Starting this quarter, all Riverside credit and debit cards will be reissued with new EMV Chip Technology. This technology features standard debit and credit cards with embedded microprocessor chips that store and protect cardholder data. Unlike magnetic-stripe cards, every time an EMV card is used for payment, the card chip creates a unique transaction code that cannot be used again. Depending on the device which you are using, you will either slide the card or enter the card into the chip reader. The microchip provides an additional level of authenticity for the transaction to help combat fraud and protect sensitive payment data.

If you have any questions about your card being reissued, please call us at 716-875-1747.
